

REP EDGE 5.3 RELEASE NOTES

New Features

Description																	
Enhanced RepEdge to use a newer version of nHibernate backend technology. This will help provide a more stable RepEdge environment.																	
Resolved issues within RepEdge where a screen can still receive and process mouse clicks while the screen appears to be locked. This was causing issues where duplicate invoices, duplicate releases, and even duplicate projects could be created.																	
Enhanced RepEdge to resolve application crash issues when using Rep Edge on touchscreen devices.																	
<p>Added functionality to allow for a default shipping value to be calculated on Warehouse orders. This is based on a default percentage as defined in the office parameters.</p> <p>This setting can be changed by an Office Administrator in the Warehouse tab of the Office Detail settings.</p>																	
<p>On the Warehouse Release screen you will now have a choice between Default Freight and Customize Freight. If you use the Default option, the freight amount will be calculated based on the Office Default.
